

Evoy Boating is A Breeze

Announcing the launch of a game changer 120hp engine

We are happy to announce the introduction of a new Evoy motor output level, the Breeze. Both for inboard and outboard this 120 hp motor punches well above its weight, with up to 185 hp in peak performance.

This is a game changer product that powers everything from small fast boats with outboard, sterndrive, waterjet or shaft, and larger slow moving displacement boats and sailing yachts.

Breeze is built around our 400 Volt technology and delivered as Plug-and-play from Evoy.

Incredibly silent, of course, and with torque unparalleled for this motor size, the inboard weighs just 90 kg while the outboard is 190 kg.

Leif Stavøstrand, Founder and CEO, adds:

The release of the Breeze is a very important milestone for us, addressing a major void in the electric propulsion market. Since the beginning of Evoy there has been a big ask for this size, so we are really excited to have it available. Since it fits in both smaller planing hull boats and also larger displacement boats, this is a true gamechanger, where we allow a whole new segment of boaters to go fossil fuel free and enjoy the silence of irresistible boating.

Due to strong demand the outboard Breeze is already pre ordered and sold out through the summer season. We are happy to announce that the Inboard Breeze 120 hp will be available to the market in pilot version in Q3-22.

The introduction of the Breeze has a nice knock on effect to the Evoy product line.

Today's 150 hp Gale will now be increased to 200hp where the inboard 200 hp will be available in 2023 and the outboard in 2024.

From a proud CTO, Marius Dyrseth:

Evoy's ambitious plan to make high performance electric boat systems available for everyone, from 120 to 400 hp, has become reality. Both the Hurricane and now the Breeze are ready for an eager market. This is nothing less than a revolution and a paradigm shift in the electric boating experience. I applaud the incredible Evoy team!

In addition to the Breeze and Gale with 400 Volt, Evoy is the only provider of a 800-volt system in the e-boating industry, supporting the current available Hurricane 400+ hp and the future Storm 300 hp.

About Evoy

Evoy was founded in 2018 and is based in Florø, Norway. Evoy design, develop, and deliver powerful 100% electric motor systems (outboard and inboard), made in Norway. Evoy's systems are built for fast and powerful boats between 20 and 50 ft, bringing the superiority

of electric leisure and commercial boating into new markets with Evoy's ground-breaking technology.
